## Lunar Problem Student Worksheet

You are a member of a future space crew originally scheduled to land at a lunar base on the lighted surface of the moon. Due to mechanical difficulties, your spacecraft was forced to land at a spot some 20 miles from the base. During the landing, the spacecraft and much of the equipment was damaged. Since survival depends on reaching the base, the most critical items available must be chosen for the 20 -mile trip (assume that a way has been to developed for astronauts to eat and drink outside of their spacecraft). Listed below are ten items left intact and undamaged after landing. Your task is to rank order them in terms of their importance for your crew in enabling them to reach safety to the base. Place the number $\mathbf{1}$ by the most important item, the number $\underline{\mathbf{2}}$ by the second most important, and so on through number $\underline{\mathbf{1 0}}$, the least important.
$\qquad$ Food concentrate
Fifty feet of nylon rope
Portable heating unit
One case of dehydrated milk
Two 100 lb . tanks of oxygen
Star map
Magnetic compass
Five gallons of water
First aid kit containing injection needles
Solar-powered radio
